Report course evaluation

Dear Prof. Dr. Christian Baun,

this report contains the results of the course evaluation for Master Project AI-Drones to questionnaire type "LVE_sem_e3":

In the first part of the analysis report the values of all individual questions are listed. Then you can find the individual average values of the scales specified in a line.

In the last part are the answers to the open-ended questions.

Please let us know if you have questions or suggestions for improvement for the evaluation (evas@fra-uas.de)

5. A few more things we would like you to tell us...

5.3) What did you especially like about this course?

- Real work with the drone was fun.
- The opportunity to really experience with a drone is very interesting. Also the allowance for trial and error allows us to have the audacity to experiment.
  Overall, I really like the practical knowledge and experience I had gained in this course, despite it is very challenging, especially for those who don't have a lot of knowledge in hardware area.
- Viele Möglichkeiten für Flugübungen

5.4) Your suggestions for improvement:

- Even though you had said that having to build the drone from scratch in the last semester makes the project much harder, I do believe that it should still be in the task list, because building the drone from scratch would make us understand how it works much more clearly and it would be easier for later tasks.
  Regarding the high workload, other tasks can be reduced to, for example, only AI implementation or only (production-graded) drop mechanism.
