Question 4)

Points: ....

Maximum points: 3+4=7

a) Error Correction via simplified Hamming Distance (Hamming ECC method). Calculate the message, that will be transmitted (payload inclusive parity bits).

Payload: 10111110

Step 1: Determine parity bit positions:

```
             Position:  1  2  3  4  5  6  7  8  9 10 11 12
Data to be transmitted: ?  ?  1  ?  0  1  1  ?  1  1  1  0
```

Step 2: Calculate parity bit values:

```
        0011 Position 3
        0110 Position 6
        0111 Position 7
        1001 Position 9
        1010 Position 10
    XOR 1011 Position 11
    -------------------
        1010 = parity bit values
```

Step 3: Insert parity bit values into the transmission:

```
             Position:  1  2  3  4  5  6  7  8  9 10 11 12
Data to be transmitted: 1  0  1  1  0  1  1  0  1  1  1  0
```

b) Error Correction via simplified Hamming Distance (Hamming ECC method). Verify, if the received message was transmitted correctly.

Received message: 101110100010

```
Received data: 1  2  3  4  5  6  7  8  9 10 11 12
               1  0  1  1  1  0  1  0  0  0  1  0

        0011 Position 3
        0101 Position 5
        0111 Position 7
    XOR 1011 Position 11
    -------------------
        1010 Parity bits calculated
    XOR 1010 Parity bits received
    -------------------
        0000 => Correct transmission
```
